

Ideation Phase

Brainstorm & Idea Prioritization Template

- **Date:** 18 June 2026
- **Project Name:** Shopez (MERN Stack E-commerce Application)

Brainstorm & Idea Prioritization Template

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

- **Objective:** Gather the team to outline requirements and define the core problem statement for Shopez.
- **Selected Problem Statement:** Traditional e-commerce platforms are often too bulky, have complex setups, suffer from slow checkout flows, or lack simple fallback mechanisms when server connections or cloud databases fail.
- **Collaboration Medium:** Digital board tools and real-time document editing.

Step-2: Brainstorm, Idea Listing and Grouping

- **Frontend UI:** Responsive navbar, grid-based product lists, dynamic interactive shopping cart, checkout page with animated credit card graphics, admin panel with insights and analytics toggle.
- **Backend Core:** Express/Node server with standard API routes for products, users, authentication, and orders.
- **Database & Fallback:** Standard MongoDB integration but with a fallback system that loads from local JSON files if the remote database is unreachable.
- **Authentication:** Token-based JWT authentication, secure credential storage, role-based admin vs customer authorization.

Step-3: Idea Prioritization

We categorized features based on feasibility and impact:

1. **High Impact / High Feasibility (Core MVP):** User registration/login, shopping cart, product display, secure checkout, admin dashboard view.
2. **High Impact / Low Feasibility (Nice to Have):** Dynamic animated credit card UI checkout, server fallback loading.
3. **Low Impact / High Feasibility:** Basic user profiles, stats panels.
4. **Low Impact / Low Feasibility:** Multi-lingual translations, AR product previews.
