

Ideation Phase

Define the Problem Statements

- **Date:** 18 June 2026
- **Project Name:** Shoppez

Customer Problem Statement Template

A well-articulated customer problem statement allows the team to find the ideal solution for the challenges customers face.

Problem Statement 1 (PS-1): The Customer Perspective

- **I am:** An online retail shopper named Aashritha.
- **I'm trying to:** Securely purchase items from the web store using my credit card.
- **But:** Traditional checkout forms are long, boring, and do not provide clear visual feedback about input errors.
- **Because:** They lack interactive visual representations of cards and real-time validations.
- **Which makes me feel:** Reluctant to finish the purchase, leading to high cart abandonment rates.

Problem Statement 2 (PS-2): The Administrator Perspective

- **I am:** A store inventory manager.
- **I'm trying to:** Track sales performance, view recent orders, and update stock counts easily.
- **But:** Standard backend databases often fail, causing the entire platform to crash, and admin dashboards often display text in poor contrast modes.
- **Because:** There is no automatic database fallback mechanism and styling issues persist in dark/white text elements.
- **Which makes me feel:** Frustrated and unable to process client orders or analyze store performance.
