

# Project Design Phase

## Solution Architecture

- **Date:** 18 June 2026
- **Project Name:** Shopez

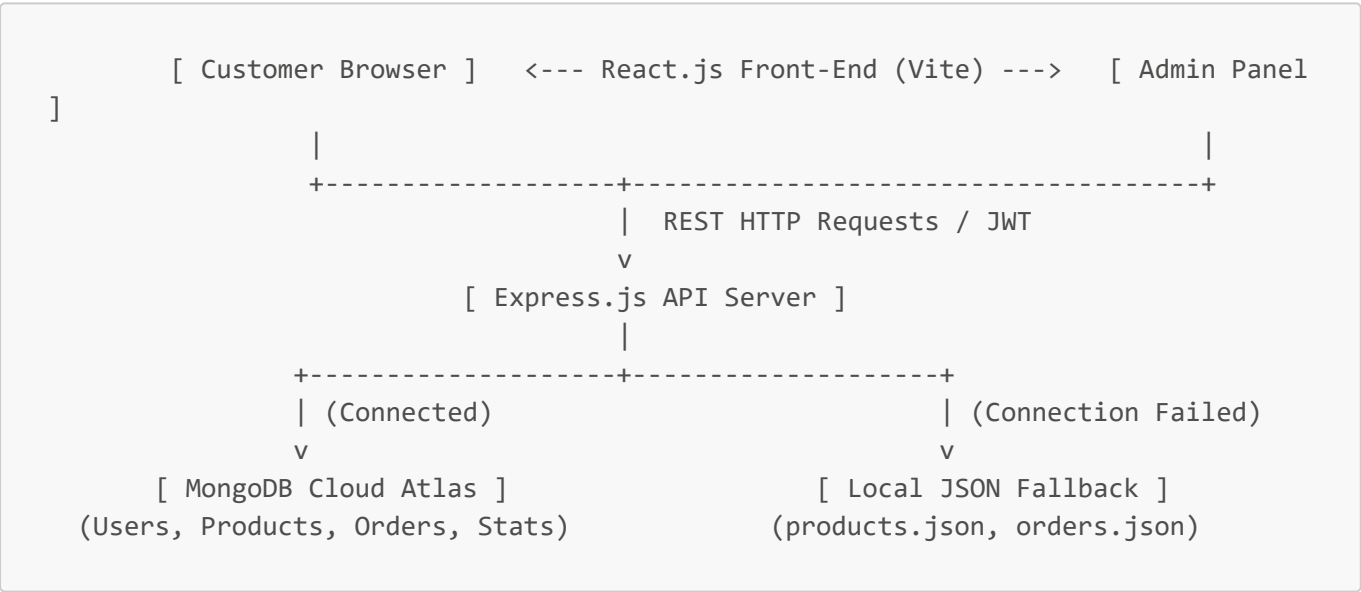

### Solution Architecture

Solution architecture bridges the gap between business requirements and technical implementation.

#### Core Objectives

1. Find the best technology stack to support secure and reliable e-commerce transactions.
2. Provide a clear structure of data flows, routing, and databases to stakeholders.
3. Manage fallback cases (like database disconnection) seamlessly.

#### Architecture Components Diagram Mapping

#### Specifications

- **API Routing:** Express router processes requests (`/api/auth`, `/api/products`, `/api/orders`, `/api/admin`).
- **Database Fallback Handler:** A middle layer helper checking db status before query execution. If down, reads/writes using Node `fs` module.
